

# Squeezing of quantum noise

Jinyuan Wu

# Introduction

Even when the system is isolated from the environment ...

There are still uncertainty: *quantum noise*

# Visualize quantum noise

$$H = \int d^3\mathbf{r} \left( \frac{1}{2} \epsilon \mathbf{E}^2 + \frac{1}{2\mu} \mathbf{B}^2 \right) = \sum_k \omega_k \left( a_k^\dagger a_k + \frac{1}{2} \right)$$

Quasi-  
probability  
distribution:  
**Wigner  
function**

Consider only one mode

$$W(x, p) = \frac{1}{\pi \hbar} \int_{-\infty}^{\infty} \langle x - y | \rho | x + y \rangle e^{-2ipy/\hbar} dy$$

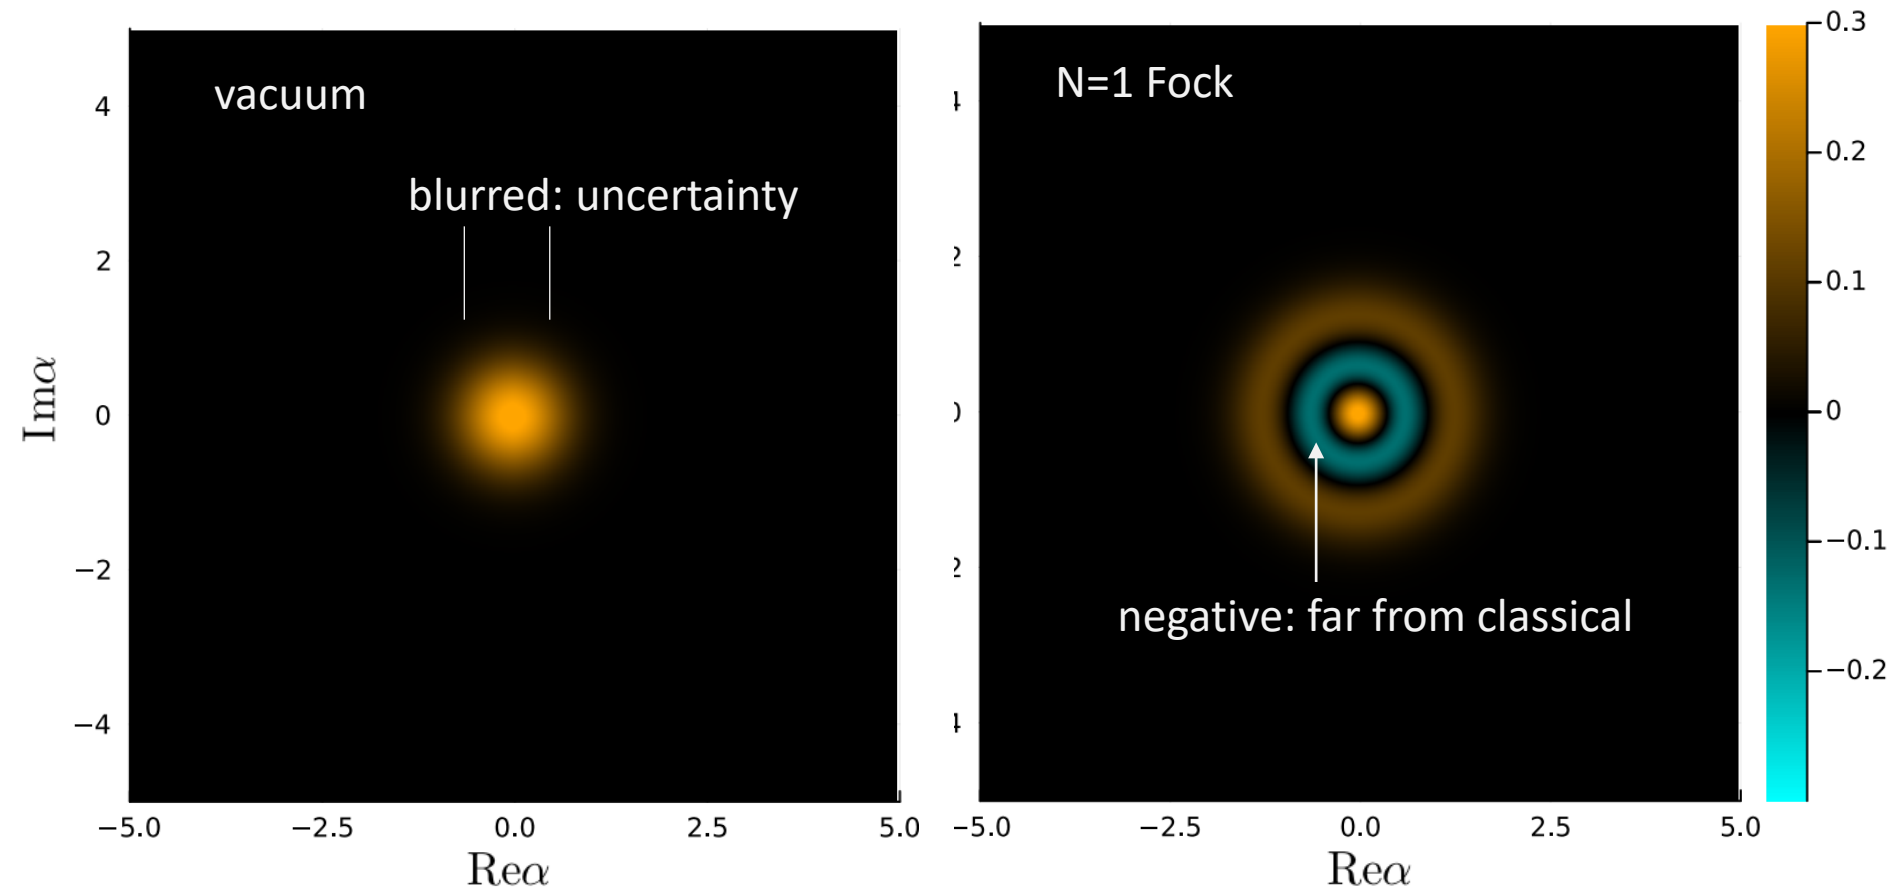

So that

$$a = \frac{1}{\sqrt{2}}(X + iP), \quad a^\dagger = \frac{1}{\sqrt{2}}(X - iP).$$

$$\langle O(a, a^\dagger) \rangle = \int d^2\alpha W(\alpha, \alpha^*) O(\alpha, \alpha^*)$$

Ordering:  $(a^\dagger a + a a^\dagger)/2$

# Visualize quantum noise

To find these Wigner functions: use [QuantumOptics.jl](https://github.com/quantumoptics/QuantumOptics.jl)

# Mach-Zehnder interferometer

$$n_{b_2} = b_2^\dagger b_2 = \sin^2 \varphi a_1^\dagger a_1 + \cos^2 \varphi a_2^\dagger a_2 - i \sin \varphi \cos \varphi (a_1^\dagger a_2 - a_2^\dagger a_1)$$

# The origin of quantum noise

$$n_{b_2} = b_2^\dagger b_2 = \sin^2 \varphi a_1^\dagger a_1 + \cos^2 \varphi a_2^\dagger a_2 - i \sin \varphi \cos \varphi (a_1^\dagger a_2 - a_2^\dagger a_1)$$

suppressed by  $\varphi$  factor

almost zero

$a_1$  can be treated classically

$$\begin{aligned} \Delta n_{b_2} &\approx \varphi \Delta(\alpha^* a_2 - \alpha a_2^\dagger) \\ &= 2\varphi |\alpha| \Delta(-\sin \varphi \operatorname{Re} a_2 + \cos \varphi \operatorname{Im} a_2) \end{aligned}$$

If  $a_2$  is in ordinary vacuum:  
standard quantum limit

$$\Delta n_{b_2} = \varphi |\alpha|$$

$$\frac{\Delta n_{b_2}}{n_{b_2}} = \frac{1}{|\alpha| \varphi} \sim \frac{1}{\sqrt{N}}$$

# Squeezing the quantum noise

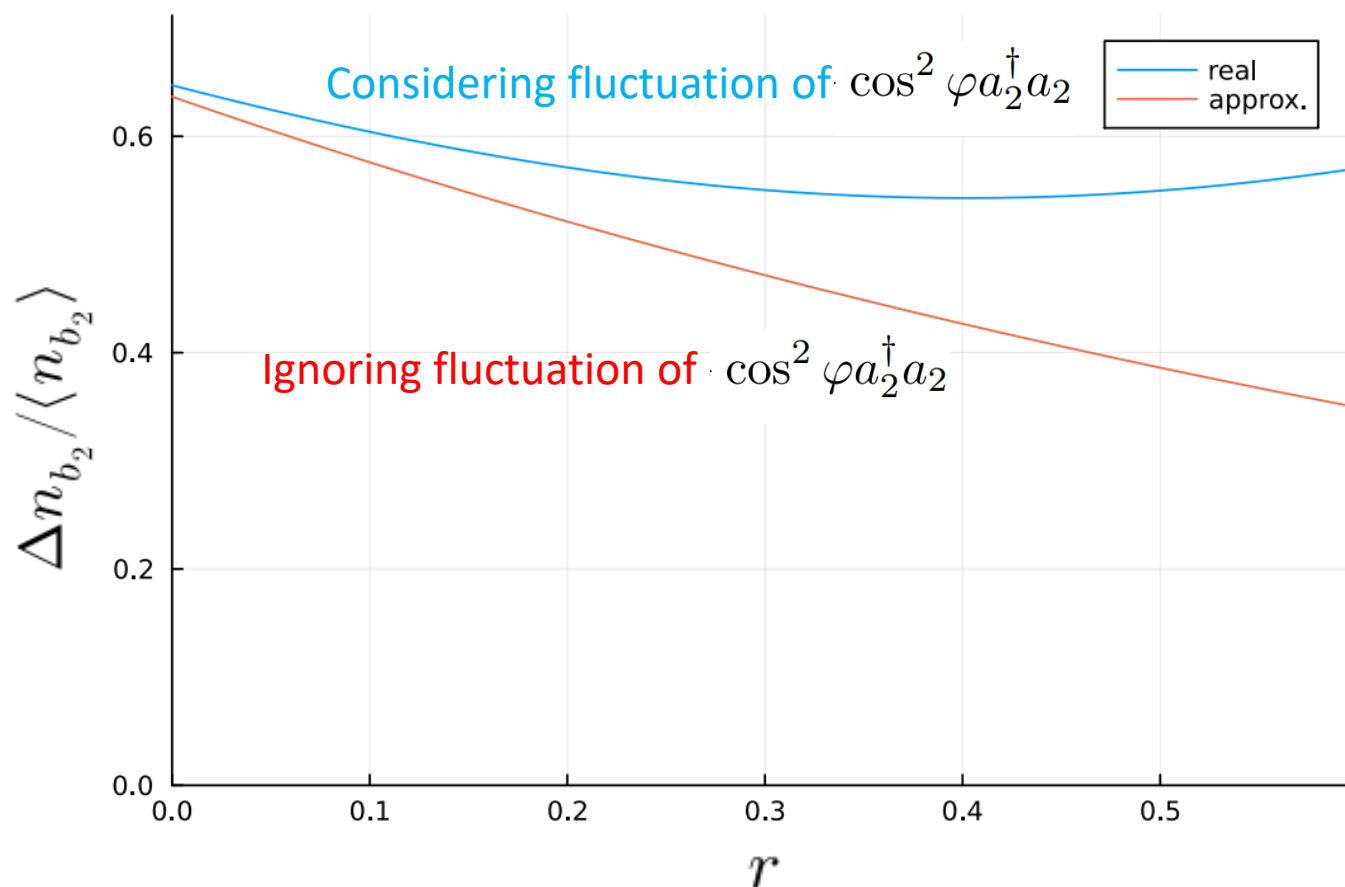

To reduce the quantum noise:

# Squeezing the quantum noise

Unfortunately, if we squeeze the vacuum too much ...

$\cos^2 \varphi a_2^\dagger a_2$  can no longer be ignored

# Discussion

Even better interferometry designs?

Standard  
quantum  
limit

Heisenberg  
limit
