Bosonic modes in Fermi liquid

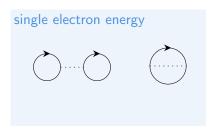

Jinyuan Wu

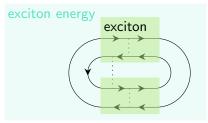

May 7, 2023

1 / 18

Background

- In a Fermi liquid we have . . .
 - ullet Quasiparticles (electron/hole) with Σ -correction
 - Any anything else?

...and more

Jinyuan Wu Introduction May 7, 2023 2 / 18

Question

What to do

Finding modes other than the corrected single electron/hole

Why it's important

Usually not for C_V but for optical response: ϵ , $\chi^{(3)}$, etc.

Jinyuan Wu Introduction May 7, 2023 3 / 18

Question

What to do

Finding modes other than the corrected single electron/hole

Why it's important

Usually not for C_V but for optical response: ϵ , $\chi^{(3)}$, etc.

Today's topic

Electron-hole bosonic modes in Fermi liquid (with *some* scattering picked up back, i.e. beyond $\delta E \sim \varepsilon \, \delta n + f \, \delta n \, \delta n$), i.e.

$$|\text{single excitation}\rangle = \sum_{\boldsymbol{k}_1,\boldsymbol{k}_2} c_{\boldsymbol{k}_1\boldsymbol{k}_2} \left| \begin{array}{c} \bullet \\ \bullet \end{array} \right\rangle \tag{1}$$

No trion, higher order correlation, or even more exotic spinons, etc. beyond Fermi liquid

Jinyuan Wu Introduction May 7, 2023 3 / 18

Methodology

Series quantitative prediction Bethe-Salpeter eq. (BSE) *Problem*: no picture about "how the electron moves"

Jinyuan Wu Introduction May 7, 2023 4 / 18

Methodology

Series quantitative prediction Bethe-Salpeter eq. (BSE) *Problem*: no picture about "how the electron moves"

Single electron linear response singularity = bosonic modes $c_{\mathbf{k}_1}^{\dagger} c_{\mathbf{k}_2} = \text{single-electron distribution} = \text{electron-hole pair annihilation}$ operator

Jinyuan Wu Introduction May 7, 2023 4 / 18

<u>Methodology</u>

Series quantitative prediction Bethe-Salpeter eq. (BSE) Problem: no picture about "how the electron moves"

Single electron linear response singularity = bosonic modes $c_{m{\iota}}^{\dagger}, c_{m{k}}, = ext{single-electron distribution} = ext{electron-hole pair annihilation}$ operator

Quantum Boltzmann eq. (QBE) Easiest kinetic theory for single-electron distribution to external field perturbation.

Conditions of QBE

- low (external and inherent) ω
- long wave length
- well-defined quasiparticles; high order correlation not important

Introduction

Jinyuan Wu May 7, 2023

4 / 18

Overview

What to investigate

Stable oscillation modes of QBE (\Leftrightarrow infinite response to external field \Leftrightarrow bosonic mode): for $n_{\boldsymbol{p}\sigma\sigma'}(\boldsymbol{r})$, $\varepsilon_{\boldsymbol{p}\sigma\sigma'}=\varepsilon[\delta n]$,

$$\frac{\partial n_{\boldsymbol{p}}}{\partial t} + \underbrace{\frac{\partial \varepsilon_{\boldsymbol{p}}}{\partial \boldsymbol{p}} \cdot \frac{\partial n_{\boldsymbol{p}}}{\partial \boldsymbol{r}}}_{\text{diffusion}} - \underbrace{\frac{\partial \varepsilon_{\boldsymbol{p}}}{\partial \boldsymbol{r}} \cdot \frac{\partial n_{\boldsymbol{p}}}{\partial \boldsymbol{p}}}_{\text{force}} + \underbrace{i\left[\varepsilon_{\boldsymbol{p}}, n_{\boldsymbol{p}}\right]}_{\text{multi-band}} = \underbrace{I_{\text{Fermi golden rule}}}_{\text{collision}}.$$
 (2)

<□ > <□ > <□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Jinyuan Wu Introduction May 7, 2023 5 / 18

Overview

What to investigate

Stable oscillation modes of QBE (\Leftrightarrow infinite response to external field \Leftrightarrow bosonic mode): for $n_{\boldsymbol{p}\sigma\sigma'}(\boldsymbol{r})$, $\varepsilon_{\boldsymbol{p}\sigma\sigma'}=\varepsilon[\delta n]$,

$$\frac{\partial n_{\mathbf{p}}}{\partial t} + \underbrace{\frac{\partial \varepsilon_{\mathbf{p}}}{\partial \mathbf{p}} \cdot \frac{\partial n_{\mathbf{p}}}{\partial \mathbf{r}}}_{\text{diffusion}} - \underbrace{\frac{\partial \varepsilon_{\mathbf{p}}}{\partial \mathbf{r}} \cdot \frac{\partial n_{\mathbf{p}}}{\partial \mathbf{p}}}_{\text{force}} + \underbrace{i\left[\varepsilon_{\mathbf{p}}, n_{\mathbf{p}}\right]}_{\text{multi-band}} = \underbrace{I_{\text{Fermi golden rule}}}_{\text{collision}}.$$
 (2)

What to expect

Three types of important bosonic modes:

- Zero sound in uncharged single-band Fermi liquid
- Plasmon in charged single-band Fermi liquid = zero sound + long range interaction
- Exciton in charged multi-band Fermi liquid

 6 / 18

Equation governing zero sound

System Single-band Fermi liquid with spin ignored

 $\textbf{Kinetics of uncharged Fermi liquid } \textit{Landau equation} = \mathsf{QBE} + \\$

$$\varepsilon_{\mathbf{p}}(\mathbf{r}) = \varepsilon_{\mathbf{p}}^{0} + \frac{1}{V} \sum_{\mathbf{p}'} f_{\mathbf{p}\mathbf{p}'} \, \delta n_{\mathbf{p}}(\mathbf{r})$$
 (3)

(assumption: ${m q} o 0$ in $c^{\dagger}_{{m p}+{m q}} c_{{m p}}$, i.e. $\delta n_{{m p}}({m r})$ being smooth in ${m r})$

EOM governing zero sound Small disturbance, no collision, :

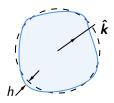

$$\frac{\partial \delta n_{\mathbf{p}}}{\partial t} + \frac{\partial \varepsilon_{\mathbf{p}}^{\text{static}}}{\partial \mathbf{p}} \cdot \frac{\partial \delta n_{\mathbf{p}}}{\partial \mathbf{r}} - \frac{\partial n_{\mathbf{p}}^{\text{static}}}{\partial \mathbf{p}} \cdot \underbrace{\frac{1}{V} \sum_{\mathbf{p}'} f_{\mathbf{p}\mathbf{p}'} \frac{\partial \delta n_{\mathbf{p}}}{\partial \mathbf{r}}}_{\partial \delta \varepsilon_{\mathbf{p}}/\partial \mathbf{r}} = 0$$
 (4)

Jinyuan Wu Zero sound May 7, 2023 6 / 18

Fermi surface vibration

Ansatz Disturbance as small as possible . . .

$$n_{\mathbf{p}}(\mathbf{r},t) = e^{\mathrm{i}(\mathbf{q}\cdot\mathbf{r} - \mathrm{i}\,\omega t)} \,\theta(\mu - \varepsilon_{\mathbf{p}}^{\mathrm{stable}} - h(\hat{\mathbf{p}})) \tag{5}$$

Eigenvalue problem

$$(\omega - \mathbf{q} \cdot \mathbf{v})h(\hat{\mathbf{k}}) = \mathbf{q} \cdot \mathbf{v} \int \frac{\mathrm{d}\Omega'}{4\pi} F(\vartheta)h(\hat{\mathbf{k}}'). \tag{6}$$

where \mathbf{v} is single-electron velocity. \Rightarrow zero sound has linear dispersion; zero sound requires $F \neq 0$

Modes

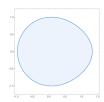

Shape of Fermi surface

Distortion More electrons in \hat{q} ; less electrons in $-\hat{q}$

Zero sound is not density wave In zero sound $V_{\mathsf{Fermi sea}} = \mathsf{const.} \Rightarrow \mathsf{zero}$ sound is not ordinary sound

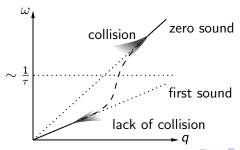

Comparison with ordinary sound

Ordinary sound Fermi liquid theory $\Rightarrow \partial \rho/\partial P \Rightarrow$ another sound mode ("first sound", ordinary sound, density mode) from hydrodynamics

Relation with zero sound

- First sound appears when $\omega \tau \ll 1$: ordinary hydrodynamics \Leftrightarrow local equilibrium $\Leftrightarrow \tau \ll 1/\omega$
- ullet zero sound appears when $\omega au\gg 1$: no collision integral $\Leftrightarrow au\gg 1/\omega$

The two are connected: a radical finite-T correction

Jinyuan Wu Zero sound May 7, 2023 9 / 18

What happens with long-range interaction

The origin of $f_{pp'}$

$$f_{\mathbf{k}\mathbf{k}'} = \lim_{\mathbf{q} \to 0} \begin{pmatrix} \mathbf{k} \\ \mathbf{k}' \\ \mathbf{k}' + \mathbf{q} \end{pmatrix} \begin{pmatrix} \mathbf{k}' \\ \mathbf{k}' - \mathbf{k} \\ \mathbf{k}' + \mathbf{q} \end{pmatrix} (7)$$

Coulomb interaction \Rightarrow first term divergent in $\textbf{\textit{k}}$ space \Rightarrow it should be considered in $\textbf{\textit{r}}$ space

Landau-Silin eq.

$$\frac{\partial n_{\mathbf{p}}}{\partial t} + \frac{\partial \varepsilon_{\mathbf{p}}}{\partial \mathbf{p}} \cdot \frac{\partial n_{\mathbf{p}}}{\partial \mathbf{r}} - \frac{\partial (\varepsilon_{\mathbf{p}} - e\varphi(\mathbf{r}))}{\partial \mathbf{r}} \cdot \frac{\partial n_{\mathbf{p}}}{\partial \mathbf{p}} = \underbrace{I_{\text{Fermi golden rule}}}_{\text{collision}}, \tag{8}$$

$$\varepsilon_{\mathbf{p}}(\mathbf{r}) = \varepsilon_{\mathbf{p}}^{0} + \frac{1}{V} \sum_{\mathbf{p}'} f_{\mathbf{p}\mathbf{p}'} \, \delta n_{\mathbf{p}}(\mathbf{r}), \quad \nabla^{2} \varphi = \mathbf{e} \cdot \frac{1}{V} \sum_{\mathbf{p}} n_{\mathbf{p}}(\mathbf{r}).$$
 (9)

Jinyuan Wu Plasmon May 7, 2023 10 / 18

Plasmon mode

Plasmon is gapped When $q \rightarrow 0$ we get to the elementary case

$$m\ddot{\mathbf{x}} = -m\omega^2 \mathbf{x} = (-e)\mathbf{E} = -e \cdot \frac{1}{\epsilon_0} e n \mathbf{x} \Rightarrow \omega = \sqrt{\frac{ne^2}{\epsilon_0 m}}.$$
 (10)

Comparison with zero sound When $q \to 0$, $\varphi(r) \Rightarrow$ oscillation: long-range interaction \Rightarrow finite gap

Comparison with first sound $V_{\text{Fermi sea}} = \text{const.}$ in plasmon as well: plasmon is not a density mode

Jinyuan Wu Plasmon May 7, 2023 11 / 18

Summary

Fermi liquid, uncharged: zero sound

- Linear, gapless
- From $f_{pp'}$

Fermi liquid, charged: plasmon

- Divergent Hartree term ⇒ self-energy correction in real space
- When $\mathbf{q} = 0$: $f_{\mathbf{p}\mathbf{p}'}$ not important; gapped

Two bands: exciton

Jinyuan Wu Summary May 7, 2023 12 / 18

BSE and single-electron kinetic theory

Series calculation

Bethe–Salpeter equation (BSE) is for quantitative calculations.

What we need Linear response of single-electron under external field = BSE (simplest single-electron theory: QBE)

Next step: relation between K and Σ

Jinyuan Wu Further discussion May 7, 2023 13 / 18

Linking Σ with K

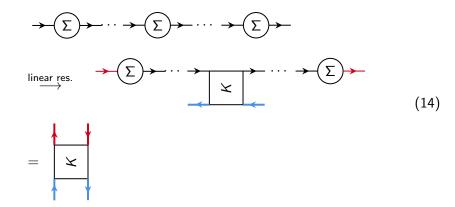

Linear response of a single self-energy diagram

Jinyuan Wu Further discussion May 7, 2023 14 / 18

Linking Σ with K

Whole picture

Linking Σ with K

Example: linear response from time-dependent GW = BSE

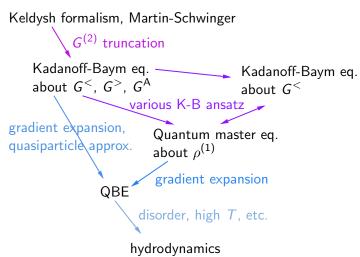

- First term = Electron Hartree term = Electron direct term = Exciton exchange term; +1 prefactor;
- Second term = Electron Fock term = Electron exchange term = Exciton direct term; (-1) prefactor.
